

Special Server Setup Procedure (if any):

-

HTTP Requests/Routes:

- POST /listing [userId, formContent] where userId is a JSON object describing the user id of the user posting the listing and where formContent is a JSON object describing the content of the listing.
 - Posts a new listing. Replaces the postListing mock server method. Creates a new /listing by user id. Any registered user is authorized to use the request.
- GET /listing/:listingId
 - Gets a listing by its Id. Replaces the getListingById mock server method. Returns /listing by listing id. Anyone, even non registered users, are authorized to use the request.
- GET /animal/:animalId
 - Gets an animal by its Id. Replaces the getAnimalById mock server method.
- POST /comment [author, text, listingId] where author is a JSON object describing the author of the comment. text is the text/content of the comment. listingId is the id of the listing the comment is being posted to.
 - Posts a new comment on the listing by author. Replaces the postComment mock server method. Creates a new /comment. Anyone, even non registered users, are authorized to use the request.

Individual Contributions

- Amy Ham Liu. Made the POST /listing, GET /listing/:listingId, and POST /comment routes.
- Matt - Made GET /animal/:animalId
- Gabe- Used GET/listing to populate the news feed
- Kalju Lee - Contributed to the smooth merging of the routing-branch and master, fixed redundant use of components.
- Huan Wang - Made Post /rating

- Nicolas Skirkey - Contributed to the smooth merging of the routing-branch and master, fixed bug with checkboxes not unchecking in findpetfields component. Created GET “/results/:resultId.

Lingering Bugs/ Issues/ Dropped Features (if any):

- GET/listing does not correctly return a listing for the news feed (404 error)
- GET/results does not correctly return a listing for the result list(500 error)
