Startup 02- Static UI Mockup Written Report

UI Tour

Homepage

- This is the landing page for LitterBox. This page provides access to all other pages on the website. In addition to navigation, the main page provides a news feed. Although currently the news feed contains dummy news, in the future the news feed will include site relevant news such as new listings, adoptions, etc. There is also designated ad space for things like deals on supplies for online retailers and such.

The screenshot shows the 'List Pet' screen of the LitterBox application. At the top is a teal navigation bar containing the LitterBox logo, a search bar, a submit button, and icons for Profile, Messages (1), News (3), and a menu. The main content area is titled 'List Pet' and contains a form with the following fields:

- Type**: A text input field with placeholder text '(eg. cat, dog)'.
- Breed**: A text input field with placeholder text '(eg. siamese)'.
- Gender**: Radio buttons for **Male** and **Female**.
- Age**: A text input field with placeholder text 'Age'.
- Zip Code**: A text input field with placeholder text 'Zip Code'.
- Description**: A large text area with placeholder text 'Enter description...'.
- File input**: A section with a 'Choose File' button, the text 'No file chosen', and a smaller text 'Add a picture of your pet!'.

A blue 'View listing' button is located at the bottom right of the form.

List Pet screen.

- The “List Pet” screen is accessed from one of the “Main Page’s” menu buttons. This page’s common element with the other screens is the navigation bar. The purpose of this screen is to provide users a form of input in order to create and post a listing of the desired pet. The listing’s main text fields ask for: type of animal, breed of the pet, gender, age, zip code used as a location reference, and an open description box for the user to include any additional information they may seem fit. There is also an option to attach files to include photos of the pet. Finally, there is a “View listing” button that saves the user’s input and redirects the user to view their “Listing” screen.

Listing screen

- The “Listing” screen can be accessed through the search of listings or after a user chooses to create a listing (as it redirects the user to their own listing after finishing their input). This page also shares the common element of the navigation bar. The purpose of this screen is to provide information of listings that other users have made. This screen contains the information inputted from the “List” screen like Type and Breed, but there’s also text that indicates when the listing was created. At the top left, there is basic information shown about the user who created the listing, which includes their username, location, number of ratings, and the date their account was created. There is also a box to view comments that other users have posted and another panel where users can post their own comment to the current listing.

Pet of the Month

Every month we will feature a new pet on the “Pet of the Month” page. The idea behind this is to promote the adoption of an animal that has some sort of special story. I tried to make it as simple as possible. The users can get a look at the pet and a quick description at the top of the page and then below that there is a section for the story of that pet. Includes new and improved NavBar.

Profile_1

This screen comes up when a user looks at someone else's profile page. The user can access contact information by clicking the Contact me! button on the left and other information such as bio and membership time. In the middle is the rating widget. You can get the reviews from others or add a new one. Wish list and post history are on the right. You can get Cardies' recent records.

The screenshot shows a user profile for 'Cardie' on the LitterBox website. The header includes the LitterBox logo, a search bar, and navigation links for Profile, Messages, News, and a user menu. The profile section on the left features a cartoon avatar of a person with a large head and a wide, toothy grin. Below the avatar, the name 'Cardie' is displayed, followed by contact information: mobile: (000)000-0000 and email: cardie@umass.edu. A bio section states 'A Umass undergrad student.' and 'Joined 5 years ago'. The central 'Ratings' section shows a bar chart for '50% Positive reviews' and filters for 'positive reviews only', 'neutral reviews only', and 'negative only'. It lists two reviews: one by 'Duncan' from 'Yesterday at 2:29pm - Amherst, MA' with a rating of 29 and a comment 'I am a big fan of Cardie!', and another by 'Anonymous' from 'September 1, 2012 - Austin, TX' with a rating of 1 and a comment 'Don't trust Cardie, he is atrocious.'. The right sidebar contains a 'Wish List' with one entry: 'Yesterday at 3:48pm - Amherst, MA' with the text 'Want to adopt a poodle, hopefully near Amherst.', and a 'Post History' section with two entries: 'February 29, 2016 - Amherst, MA' with the text 'Succeeded: Adopted Doge from Duncan' and 'November 25, 2012 - Jinan' with the text 'Canceled: Gived away Kokoro to Guangyu Xu'.

Profile_2

This will show up when you look at your own profile page. On this page you can edit your contact information, bio, and wish list. You can also reply to the reviews from other users.

The screenshot shows the 'Find pets' search results page on the LitterBox website. The header includes the LitterBox logo, a search bar with the text 'Search specific pet or user', and a user menu. The left sidebar contains search filters: 'Location' (a text input field with 'Enter location' and a note 'City, State or Zip.'), 'Type' (a dropdown menu with 'Any' selected), 'Sub-type (breed)' (a dropdown menu with 'Please select type'), 'Age' (checkboxes for 'infant', 'Young', 'Adult', 'Senior'), 'Gender' (checkboxes for 'Male', 'Female', 'Unknown'), and 'Characteristics' (a text input field with 'Enter characteristics' and a note 'i.e. friendly, smelly, etc.'). The main 'Results' section displays three pet listings: 'Randy' (a Beagle dog, Age: Young, Gender: Male, Characteristics: Intelligent, Friendly), 'Ekans' (a Milk Snake, Age: Adult, Gender: Unknown, Characteristics: Untrustworthy), and 'Harambe' (a Western Lowland Gorilla, Age: Adult, Gender: Male, Characteristics: Heroic).

Find pets screen

This page allows the user to search for pets based on certain criteria. It displays the search results in a panel to the right. Each search result contains a thumbnail picture, some basic information, and a link to that pet's listing. If a certain pet is contained in a "litter" it will be indicated and siblings will appear grouped together.

Nearby Shelters

This page lets users find nearby shelters within a radius of themselves (or any other location). The display will hopefully be like google maps, in that each shelter will be represented by a pin, along with its relevant info.

Startup Founder Contribution

- **Amy Ham Liu.** Worked on all the elements shown in "List Pet" and "Listing screen". The creation of these screens included the use of panels, different types of bootstrap form inputs, buttons, cards, icons, and other elements. Used css elements to choose the color scheme for the navigation bar, logo, and change formatting for some elements.

- **Matt Kapulka.** Created the whole "Pet of the Month" page. Worked on the Navigation Bar so that it resembled our sketch with a search bar on the left, logo in the middle, and profile options on the right.

- **Huan Wang.** Worked on profile page except the navigation bar.

- **Nicolas Skirkey.** Created “Find Pet.” This page uses a number of different bootstrap components including forms and media objects. CSS was used to modify some default behaviour and change margins/padding/etc. Also, designed nav bar that appears in “Find Pet.”

- **Gabe Hollander.** Worked on the home page, and all of the shelter page. Specifically, the navbar, the news feed, and styling all elements. Divided the page into its respective column spaces. Used css selectors to individually customize specific elements. Used the bootstrap “form” element for the shelter page.

- **Kalju Lee.** Worked on the home page, specifically the left and right columns. Created and styled lists of media objects with slightly different formats and an alternative button layout. Created the ‘Pet of the Month’ group.
