

Team Guava - Amy Ham Liu, Nicolas Skirkey, Kalju Lee, Huan Wang, Matt, Gabe Hollander
Startup 07

Special Server Setup Procedure (if any):

- Please use **mongoring** branch for best LitterBox experience
 - Main branch was reset to a much earlier commit by accident

Lingering Bugs / Issues / Dropped Features (if any):

Individual Contributions:

- Amy Ham Liu: (work on 'mongoring' branch) Added resetdatabase.js and updated the Reset DB HTTP route. Updated corresponding document IDs. Redefined the functions: postComment, postListing, syncListing, getAnimalById, getUserById, getListingById, and created the helper function getCommentsByIds to map them to MongoDB's functionality. Updated the route GET /listing/:listingId to use MongoDB.
- Nicolas Skirkey: Updated document ID's. Updated route GET /results/:resultId function to use MongoDB. Created helper function getResultsById to return results from database. Continued to work on bugs. Fixed some display issues on findpets page that occurred when refactoring to using react-router. Handled merging issues.
- Matt Kapulka: Updated route GET /animal/:animalId to use MongoDB
- Gabe Hollander: I admittedly did no work on this Start-up.
- Huan Wang: did no work on this startup
- Kalju Lee: Added basic MongoDB connection, updated some document ID's. Made fruitless efforts at switching getRandomListing in client/server.js to return an ObjectId instead of an int.
